

HEAT LAVA

It's Time to Bring the Heat!

Our famous Heat line is expanding by one. The Heat Lava offers easy length through the front part of the lane just like the original Heat with increased motion from the midlane through the pins due to the beefed up QR-7 Pearl coverstock.

QR-7 PEARL

Our QR series of coverstocks are known for creating a strong foot print to the lane surface. This QR-7 Pearl is best suited for medium volume oil patterns. The polished finish, combined with the Modified Tri-Core, allow the Heat Lava to be a little more versatile than most balls. This allows it to perform extremely well on both medium and lighter oil patterns.

MODIFIED TRI-CORE

The Modified Tri-Core is a throw back to the core design found in the original Heat. We've matched the RG perfectly to the original while lowering the flare potential slightly to match up better with today's stronger covers. The medium RG, combined with the lower differential, are the perfect core numbers for storing plenty of energy for the backend; yet keeping its reaction predictable and consistent shot after shot.
